CARE AND MAINTENANCE

To vacuum the textiles, use a vacuum cleaner on a low setting, always placing a soft mesh between the nozzle and the piece. The mesh can rest on the textile (about 30 × 30 cm) or be secured to the nozzle with an elastic band (about 10 × 10 cm). If attached to the nozzle, replace it several times during cleaning.

WOVEN WALL PIECES

Clean thoroughly once a year. Lay the piece on a flat, clean surface. If it needs to be moved, remove the metal plates at the base of the modules and temporarily replace them with a wooden rod.

Vacuum slowly, first on the reverse and then on the front. Remove dust from the threads covered in pure gold with a soft natural-bristle brush.

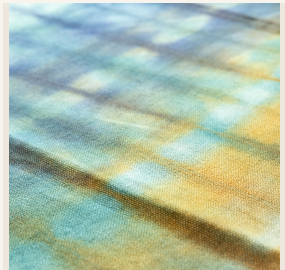

HAMMOCKS

Lay the hammock on a flat, clean surface. Vacuum the entire piece slowly, including the finishing braids and fringes.

For a thorough wash, contact a laundry service specializing in fine textiles.

TEXTILE THROWS

Lay the textile throw on a flat, clean surface and vacuum it slowly. To wash it, use water at 30 °C in an amount approximately 20 times the weight of the textile, with a mild detergent for delicate fabrics. Do not soak or wring. Dry flat, away from direct sunlight.

A little colour may run during washing due to residual dye.

LAMPS

Vacuum the textile part slowly. Remove dust from the metal parts with a medium-stiff brush. Then wipe the metal parts with a cotton cloth barely dampened with lukewarm water and mild soap.

If you are unsure how to clean or wash a piece, contact a laundry service specializing in fine textiles or the Diamantina Palacios workshop.
